Credit Risk

This section describes the main characteristics and elements of credit risk management of the Bank Saderat Iran - UAE (BSI).

Credit Quality of Assets (CR1)

This table provides comprehensive picture of the credit quality of a bank's (on- and off-balance sheet) assets.

AED 000s		a	b	c	d	e	f

Defaulted exposures is included the suspended interest thus the same is included in Allowance/Impairment as well in order to measure the precise net value.

Changes in stock of defaulted loans and debt securities (CR2)

This table highlights the changes in the stock of defaulted exposures, the flows between non-defaulted and defaulted exposure categories and reductions in the stock of defaulted exposures due to write-offs

Credit Risk Exposure and Credit Risk Mitigation effects (CR4)

This table illustrates the effect of CRM (comprehensive and simple approach) on standardized approach capital requirements' calculations and, RWA density provides a synthetic metrics on riskiness of each portfolio.

Sovereign asset class is consists of only balance with the Central Bank of the UAE.

Major portions of the banks' exposures have contractual maturity within 3 months thus carry applicable risk weight 20%.

Most of off-balance sheet exposures are constitute of unused limits and tender bond/ performance bond/ bid bond guarantees that carry applicable credit conversion factors (CCF) 0% and 50% respectively. Further most of off-balance sheet exposures, carrying applicable 100% CCF, are secured by 100% cash margin.

Major part of other assets consist of Deferred Tax Assets (DTA) which is deducted from Common Equity Tier 1 (CET1) capital as per CBUAE capital supply guideline, thus carry 0% risk weight.

Exposures by Asset Classes and Risk Weights (CR5)
